

SPEC CHECK

2012 Machine Portfolio

Corporate Portal Details and Options

Corporate Portals.

There are no limits to the number of users that can access the portal within your organization and it's dealer network. The functionality within the portals is constantly updated. New features and tools are added throughout the year at no additional cost. Most importantly, the data within the portals is updated daily. Spec Check aims to add improved metrics reports and search functionality in 2012.

Subscription costs are based on the number of machine types and regions required.

Explanation of options.

Discontinued Machine Data.

Customers who subscribe to this option are able to view all the Spec Check data available for the machine types that they have subscribed to. Otherwise only the machines currently manufactured in the selected region are available. Our European data goes back to the mid 1990s!

Media Library Access.

All the original source documents that Spec Check receives from equipment manufacturers are now digitized and saved on to our Media Server. These included **Spec Sheets, Brochures and other Marketing Literature**. Customers who wish to access these documents can then download all their competitors literature from our media library. We have over 15,000 of your competitors documents available so far.

Machine Introduction Alerts.

On the first of each month Spec Check produces an intelligence report that lists all the competitors new machine releases for each machine type around the world. The report also contains links directly to the competitor's machine specifications and any media files that are available. Users can opt in and out of this report from the corporate portal. You staff will always be up-to-date on all your competitors machine releases.

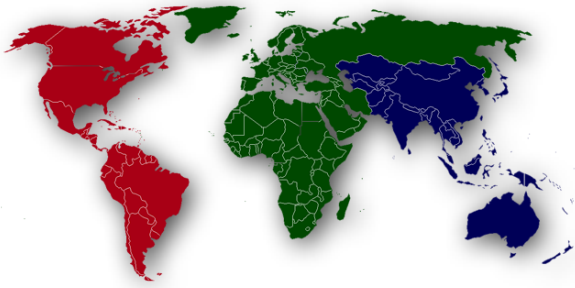

Spec Check Mobile.

New for 2012 customers can now access Spec Check data on their Smartphone or tablet. Search through the entire Spec Check data from your handset, compare machines, download competitor's literature and save for offline viewing. iPhone and iPad users can also save all comparisons and competitive literature directly into iBooks.

Spec Check Lite.

Spec Check Lite is a standalone product that our portal customers can embed into their public facing websites. It allows visitors to your public website to compare your machine with your competitors. Up to 20 specifications are licensed for display. You are able to select these specifications and change them with a supplied management tool.

Regions - Machine Portfolio.

Subscription Options :

- **Region 1 (Americas)**
- **Region 2 (Europe | Middle East | Africa)**
- **Region 3 (Asia & Australasia)**
